No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (W23088) of Pyrodictium TAG11, a thermophilic sulphur archae that CC grows optimally at 103 deg C and pH 6.5. It can be amplified from a pBluescript vector by PCR (see T79301-02). Claimed, newly C and the first vector by PCR (see T79301-02). Claimed, newly C identified polynucleotides (T79321-0) encoding esterases (W23069-027, W23088) were recovered from genomic gene libraries. They can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at 14th temperature and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may also be useful as C ripening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in the Study of plant wall structure, plant resistance to disease and corganic matter decomposition and to select plants bred for production of highly degradable animal feeds.

Claim

```
CC detecting at least one differentially expressed gene product in a test con of the differentially expressed gene product in a test concerous state of the cell suspected of being cancerous, where detection concerous state of the cell from which the test sample was derived. CC The polynucleotides sequences can be used in a method for detecting cd differentially expressed genes correlated with a cancerous state of a cc mammalian cell. The polynucleotides can also be used as probes for cd detecting and mapping related genes. They can be used in diagnosis and corremetastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-positive breast cancer.

                                                                  detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (CHIR )

                                                   cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell cuspected of being cancerous, where the gene product is encoded by one cf the 5248 polynucleotide sequences given in 212532 to 21779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer. The polynucleotides of the invention are especially used in the diagnosts, prognosis and management of colorectal cancer, breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-JAN-1998;

                                                                                                                                                                                                                                                         A00010 to A02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived.
                                                                                                         The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of pre-metastatic or metastatic cancerus states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-negative breast cancer, oestrogen receptor-negative breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Williams LT, Escobedo

                                                                CC cancerous state of a mammalian cell, comprising detecting at least one conditions of the State of being cancerous, where the gene product is encoded by one CC of the State polynucleotide sequences given in 212532 to 21779. The CC polynucleotides can be used as a source of primers and probes, which can CC be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides CC can be used for raising antibodies for experimental, diagnostic and CC therapeutic purposes. The polynucleotides may also be used to construct CC arrays for diagnostics (which may be used to detection elevels between CC cells (e.g. to identify abnormal or diseased tissue in a human, to C cidentify a genetic predisposition or susceptibility to a disease such as C cancer). The polynucleotides of the invention are especially used in the C diagnosis, prognosis and management of colorectal cancer, breast cancer, C appriled analogues and antagonatics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           method of detecting differentially expressed genes correlated with cancerous state of a mammalian cell, comprising detecting at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a library of human polynucleotides comprising the sequences given in Z12532 to Z17779. C directed against at least 2 mRNAs selected from target genes, coding and conor-coding regions of RNAs corresponding to target genes, gene

C initiation codons, genomic flanking regions, intron-exon borders, the

C 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one

C or more diseases, conditions or mixtures. The antisense oligonucleotides

C may be derived from sequences X55272-74. These multiple target

C oligonucleotides (specifically X55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions

C are those associated with impaired respiration and inflammation,

C allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,

C respiratory distress syndrome, pain, cystic fibrosis, pulmonary vasconstriction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The specification describes antisense oligonucleotides (X52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences X5527-74. These multiple target oligonucleotides (specifically X55180-721) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pre-metastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor negative breast cancer, lung cancer, and colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A00010 to A02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polynucleotide library used to

This is part of the Streptococcus antibioticus oleandomycin gene cluster. CC The oleandolide polyketide synthase (PKS), also known as CC 8,8a-deoxyoleandolide synthase, is encoded by three open reading frames CC (ORF), designated oleAI, oleAII and oleAIII. The PKS is a type I carrier protein (ACP) domain. The oleandolide PKS is a type I carrier protein (ACP) domain. The oleandolide PKS loading module contains an inactivated KS, called KS-Q, where Q is the abbreviation for CC activity. The large multifunctional PKS enzymes catalyze the biosynthesis of polyketide macrolactones through multistep pathways involving CC decarboxylative condensations between acylthicesters followed by cycles of varying beta-carbon processing activities. The macrolide product of the PKS, 8a-deoxyoleandolide, is further modified by epoxidation and CC glycosylation to yield oleandomycin, an antibacterial polyketide. The CC invention concerns an isolated recombinant DNA compound, comprising a coding sequence for a domain of loading module PKS in which the CC module 1 KS domain is inactivated by deletion or other mutation. In CC particular, the inactivation is mediated by a change in the KS domain CC coleandolide PKS in which the inactivation in the codon for the active site cysteine. The CC coleandolide PKS is useful for synthesizing polyketides, which are useful cleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide PKS is useful for synthesizing polyketides, which are useful coleandolide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              as antibiotics and motilides. Heterologous expression of oleandolide PKS in host cells such as Streptomyces coelicolor and S. lividans is also made possible. Unmodified oleandolide compounds can be provided to cultures of Saccharopolyspora erythraea and converted to the corresponding derivatives of erythromycins A-D.

The present invention describes a library of human polynucleotides CC comprising the sequences given in 212532 to 217779. Also described is a CC method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell. CC suspected of being cancerous, where the gene product is encoded by one CC suspected of being cancerous, where the gene product is encoded by one CC of the 5248 polynucleotides equences given in 212532 to 21779. The CC mapping, tissue typing or profiling, forensics, genetic analysis and CC mapping, tissue typing or profiling, forensics, genetic analysis and CC mapping, tissue typing or profiling, forensics, genetic analysis and CC can be used for raising antibodies for experimental, diagnostic and CC can be used for raising antibodies for experimental, diagnostic and CC can be used for raising antibodies for experimental, diagnostic and CC carrays for diagnostics (which may be used to determine function of an CC carrays for diagnostics (which may be used to determine function of an CC cancer); and to detect differences in expression levels between CC dientify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC cancer. The polynucleotides can also be used to screen for cancer, and lung cancer. The polynucleotides can also be used to screen for cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-APR-1998;

Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (II-IR). It may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and inflammatory bowel disease. It may also induce or suppress interleukins, cytokines an growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity of II-1 or its receptor complex.
                                                                                                                                                                                                                                         2774

roles in immune responses, cell death, cell proliferation and stimulation of cell differentiation. M68 lacks a transmembrane domain and is a secreted factor suggesting that it functions as a natural inhibitor for its ligand. The altered expression pattern of M68 in a multitude of tissues suggests that M68 may play a role in cancer by binding to its ligand and blocking apoptotic cell death induced by such a ligand. This anti-apoptopic role of M68 suggests that modulators of M68 will be useful in treatment of apoptosis-related modulators of M68 will be useful in treatment of apoptosis-related
              atherosclerosis, aplastic anaemia, myelodisplastic syndromes, osteoporosis, Alzheimers disease, Parkinsons disease, stroke, myocardial infarction.
                                                                            apoptosis including systemic lupus erythematosus, Hashimoto's thyroiditis, Grave's disease, idiopathic mysodema, autoimmune diabetes, thrombotic thrombocytopenic purpura, multiple sclerosis, liver diseases, autoimmune gastritis, ulcerative colitis,
                                                                                                                                              diseases such as various forms of cancer and various bone disorders. M68 nucleic acids and proteins are therefore useful for treating conditions involving atypical apoptosis and for identifying modulators of M68. Modulators of M68 are useful for treatment of cancer and other diseases associated with abnormal levels of
                                                               liver diseases, aut
glomerulonephritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated human M68 nucleic acids and proteins which are part of the tumor necrosis factor receptor (TNFR) family, useful for identifying modulators that may be used to treat various diseases e.g. cancer, osteoporosis, Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              atherosclerosis; aplastic anaemia; myerovare osteoporosis; Alzheimers disease; Parkinsons disease; stroke; myocardial infarction; human; ds.

Quality coverage: 3.28 in Q20 bases; sum-of-contigs estimation.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 101 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

* NOTE: This is a "vorking draft' sequence. It currently
* consists of 47 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                    dq

Estimated insert size: 197300; agarose-fp estimation
Estimated insert size: 202691; sum-of-contigs estimation
Quality coverage: 3.42 in Q20 bases; agarose-fp estimation
Quality coverage: 3.33 in Q20 bases; sum-of-contigs estimation.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 31 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Summary Statistics Consensus quality: 189570 bases at least Q40 Consensus quality: 207567 bases at least Q30 Consensus quality: 217222 bases at least Q30 Consensus quality: 217222 bases at least Q20 Estimated insert size: 290766; sum-of-contigs estimation Estimated insert size: 290766; sum-of-contigs estimation Quality coverage: 8.11 in Q20 bases; agarose-fp estimation Quality coverage: 6.44 in Q20 bases; sum-of-contigs estimation. * NOTE: This is a 'working draft' sequence. It currently * consists of 75 contigs. The true order of the pieces * is not known and their order in this sequence record is * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will	PHE PHE PHE PHE PHE PHE PHE PHE PHE PHE	F1000	Db 38111 GGGGGNGGGGGGGGGGGGGGGGGGGGGGGGGGGGG

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record
                                                                                                                                                                       72866
